

Softgroup .Net Subclass and Hook Objects Readme

Description

Subclassing and Hooking is a standard technique in Windows programming for customizing the behavior of a window.

However, to wrap subclassing into virtual function overriding it is an obscure technique unknown to a large population of Windows programmers. This is unfortunate, because there are many cases where using subclassing is the most elegant and clean way to solve most problems.

Softgroup .NET Subclass and Hook Objects supply .Net fast, small and lightweight wrapper classes that made easy and secure subclassing and hooking windows for any programmers.

Included Classes

HookApplication: provides application-wide messages subclassing. This class allows an application to capture a message before it is dispatched to a control or form.

HookClipboard: provides functionality for hooking a window to the clipboard chain.

HookConsole: enable console applications to intercept close controls command like CTRL+C, CTRL+BREAK etc.

HookWindows: provides core implementation of most common Windows hooks (keyboard, mouse, shell and many other hooks)

SubclassWindow: provides native subclass of windows messages for a form and/or control.

Requirements

Prior to running Setup to install the Softgroup .Net Subclass and Hook Objects you must already have the .NET Framework 2.x, 3.x or 4.x and Microsoft Visual Studio 2008/2010 installed on the computer.

Installation

Softgroup .Net Subclass and Hook Objects is provided as single setup package that contains all required files and documentation.

See FAQ list for more details.

Documentation and informational resources

Softgroup .Net Subclass and Hook Objects has exhaustive documentation supplied with installation where every aspect of using the product is covered in details.

Support
